Evidence verification

Prove the evidence has not changed

A read-only evidence hash checker. It recomputes hashes and compares them with values from another tool or process.

At a glance

VERSION
v1.0.3

RELEASED
10/07/2026

PLATFORM
Windows (x64)

STATUS
Shipped

- **Private by design**
- **Read-only**
- **Signed for Windows**
- **A PDF record of every check**

Validate it under your lab's own procedures.

Key capabilities

SHA-256, SHA-1, and MD5
Recomputes hashes with any of the three algorithms.

Match, Mismatch, Missing, and Extra results
Every file is reported with one of these four results.

A validation package
One folder and zip with the JSON record, the PDF, and a manifest of hashes, tool version, case details, and UTC and local times. The PDF carries a QR code and a short verification code.

A built-in self-test
A self-test runs from inside the app.

Sum files, CSV, and FTK Imager logs
Reads recorded values from these formats.

A PDF verification record named by hash
Exports the result of a verification as a PDF.

Package check
Re-verifies a package later, in the app or with the command-line tool, without a network connection.

Read-only
Hashing and verification work without a network connection, and evidence is opened for reading only.

Requirements

Operating system	Windows (x64)	**Runtime**	Included in the download. No separate .NET install is needed.
Network	Not needed to verify evidence. Used only for the optional update check.	**Installer**	71 MB
Portable zip	95 MB, no install needed	**Code signing**	Authenticode-signed through Microsoft Artifact Signing, with a timestamp.

Verify the download

Each published file has its SHA-256 on this page, with the Windows commands to check it.

DEVI-Validate-Setup-1.0.3-win-x64.exe

```
f9359d1e126ad72bbc8cda8e8cfc9407d15258c0d905e922cacf780e5c865ecc
Get-FileHash .\DEVI-Validate-Setup-1.0.3-win-x64.exe -Algorithm SHA256
```
